Only As A Companion Book - Not The Best Read

By SkydivingNerd

I would only recommend this book to someone who watches Tastytrade programming. It's more of a collection of pointers presented during Tastytrade's programs.

It reads like someone took notes while watching Tastytrade programs like Market Measures and Tasty Bites and then published their notebook. For example, the stand-alone sentence on page 3, "You can still create time decay while buying a debit spread." No context, no explanation. Just a statement. I was also disappointed by the chapter on pot odds.

It will serve as a useful reference for frequent Tastytrade viewers but do not use this book by itself as a means to learn or develop trading strategies.

For those not familiar with Tastytrade, it's the best option out there for learning options trading, and it's free. Their methodology for those who are learning to trade options or with small account balances (under \$25K) is simple:

1 - Sell \$1-wide option spreads on stocks with

a) a price between \$15 and \$50 (stocks above \$50 typically don't have dollar-increment strikes in their options chain)

- b) a Current IV Percentile above 50 (also called IV Rank, you can find this stat on the ThinkorSwim or their dough platform)
- and the options should be
- c) penny-increment options for liquidity
- d) around 45 days to expiration to "give yourself time to be right" (meaning if a trade goes bad it will have time to turn around)
- e) have about a 70% probability of expiring out-of-the-money (another stat available on the ThinkorSwim and dough platforms)

2 - Manage winners, not losers, meaning if you get a decent profit (50% to 75% of max profit) take it off but give losers time to turn around.

3 - Above all else, TRADE SMALL (single-contract spreads on dollar-wide strikes for the first couple years) so your losing trades don't lose you that much and TRADE OFTEN so the higher number of occurrences gets the "law of large numbers" theory to work in your favor (have a lot of trades on at any given time as your account balance allows, while not having more than half your account value at risk at any given time). Your long-run odds of success are much better if you routinely risk \$70 on each of ten trades than \$700 on one trade.

For example, you sell \$1-wide spreads that expire in 45 days collecting 30 cents (\$30) which gives you 70 cents (\$70) of risk on each trade. With a \$2,000 account you can have \$1,000/\$70 or 14 trades on at a time. When your "P/L Open" (profit since opening the trade) is up \$20 to \$25 close the position (the old saying "a bird in the hand...") and go on to the next trade.

Book that wasn't proofread prior to printing?

By Bryan A. Cook

There are some good ideas in the book, but I found it very painful to read due to all of the grammatical and spelling errors. Would be much more enjoyable if it didn't look like it was written as a first draft by an 8th grader.

The book mostly talks about options trading strategies, so I would recommend Trading Options Greeks: How Time, Volatility, and Other Pricing Factors Drive Profits by Dan Passarelli instead of this one.

http://www.amazon.com/Trading-Options-Greeks-Volatility-Bloomberg-ebook/dp/B0091W3CT4/ref=sr_1_2?ie=UTF8&qid=1391971360&sr=8-2&keywords=options+greeks

I think Tom Sosnoff and Tony Battista would be ashamed of the quality of this book that has their names all over it.

Best Options Book Ever

By MktngGuy

I don't think I am normally prone to hyperbole, but this is the best options book I have ever read. I bought Book 2 first, and have been so impressed that I went back and bought Book 1. From the unreadable to the unusable, every kind of options book exists out there in the libraries, bookstores and websites of the world. Most are junk. This is the first one that actually gives you strategies, methods, tips, and insights on what to do from your first trade to a full portfolio. Understand that the material is not about conventional options thinking -- there is nothing about buying, only selling options. And some can get a little complicated. But spend a little time with Tom Sosnoff and Tony Battista at tastytrade.com, and you will see why. IMHO these guys are the best, widely-known traders on the planet (with John Carter at Simpleroptions.com) and

Tony Rihan captures all their very best thinking. Read and you will never trade options the same way again.

Yes, I loved the book (and read it in one sitting), and, no, I do not know any of these people nor have any connection with them -- other than loving to trade.

Trade well and prosper!
